Super-Snap Disks
flexible and ultra-thin

Super-Snap Polystrips
great for interproximal areas

Super-Buff Disks
final polish on all composites

Super-Snap is designed for easy, fast and safe contouring, finishing and polishing of all microfilled and hybrid composites. Super-Snap Polystrips are color coded with matching grit size for easy identification and offer the same results as the Super-Snap disks for interproximal areas. Use Super-Buff disks for the final polish on all composites. They are paste-impregnated disks that, when exposed to water, release a high quality polishing paste.

Super-Snap

■ Elastic silicone shank mount for easy placement of the disk onto the mandrel
■ Manufactured without a metal center
■ Very flexible, ultra-thin disks allow easy access to interproximal areas
■ Two sizes – four grits (silicon carbide and aluminum oxide)

Super-Buff

■ Paste-impregnated with aluminum oxide
■ Disposable
■ Eliminates the potential mess associated with polishing paste syringe systems
