SIMPLY AESTHETIC

SHOFU BLOCK & DISK HC

CERAMIC-BASED RESTORATIVE

Shofu Block & Disk HC

A new hybrid ceramic restorative for CAD/CAM, HC Block/Disk features excellent physical and mechanical attributes with multiple shades and translucencies. The optical properties of HC Blocks/Disks resemble the translucency and fluorescence of natural teeth, permitting the material to seamlessly integrate with the surrounding tissue. The proprietary nano-architecture of HC Block/Disk demonstrates high flexural strength and wear resistance allowing for a fast milling and broad applications, including permanent and transitional anterior/posterior restorations for inlays/onlays, full-contour crowns, and implant-supported cases.

CAD/CAM STAIN KIT

CUSTOMIZE AESTHETICS

CAD/CAM Stain Kit

Universal and simple to use, LiteArt Stain Set for CAD/CAM & Hybrid Ceramics is design to improve the aesthetics of CAD/CAM restorations fabricated chairside. Incorporating a novel technology with the ability to mimic the natural dentition's optical properties, the assortment of stains featured in the LiteArt kit will help clinicians achieve life-like restorations, chairside. The proprietary chemical composition of the LiteArt supports a reliable adhesion to a variety of substrates, including resin-based direct and indirect materials. The low viscosity of the LiteArt stains allows for a precise application and prevents product's wasting. All stains can be layered alone or blended together to effortlessly replicate the various characteristics of natural dentition.

CAD/CAM SOLUTIONS

CADMASTER CAD/CAM KIT

CONTOUR, FINISH, AND POLISH

CADMaster CAD/CAM Kit

With the BurButler CADMaster Kit, clinicians will be able to contour, finish, and pre-polish CEREC restorations fabricated from modern CAD/CAM restorative materials, including Zirconia, lithium silicate and disilicate. Combining in one BurButler 25 diamond-filled abrasives in all shank-, head-, and grit-sizes, this universal abrasive system is a must-have for a CDA/CAM-focused dental practice of any size.

ALL CERAMIC PREPARATION KIT

QUICKLY PREP TEETH

All Ceramic Preparation Kit

The BurButler All Ceramic Preparation Kit features a selection of Robot Diamonds in FG shank, in 17 shapes and head sizes. These comprehensive system includes everything-abrasive a doctor will ever need to quickly prep a cavity for ceramic restorations fabricated from lithium silicate or disilicate, Zirconia, porcelain, leucite-reinforced ceramics, hybrid ceramics, CAD/CAM composites, and PFM.

IMPROVE YOUR WORKFLOW

MONOCEM & RESICEM CEMENT

STRONG SEAMLESS BOND

MonoCem

Formulated to simplify adhesive cementation to direct and indirect resin materials, MonoCem demonstrates excellent bond strength without the numerous intermediary steps. A moisture-tolerant, self-etch, self-adhesive resin cement with an unlimited setting time, MonoCem bonds to all substrates with high retention rates.

BEAUTICEM SA

BIOACTIVE SEAMLESS BOND

ResiCem

A dual-cure, high-strength resin cement formulated for long-term bonding to zirconia, ResiCem can be expanded using porcelain and metal primers to become a universal adhesive system for a wide range of clinical applications.

BeutiCem SA

A self-etch, self-adhesive dual-cure resin cement with only 12 μm film thickness, BeutiCem SA demonstrates reliable adhesion across a variety of materials, including composites, alloys, and selected ceramic substrates. Proprietary Giomer technology incorporate into BeutiCem SA offers bioactive benefits of fluoride release/recharge, antiplaque attributes and acid neutralization.

CERARE SIN BOND

RELIABLE ADHESION

CeraResin Bond

Simple and intuitive to use, CeraResin Bond facilitates reliable adhesion to porcelain, ceramic, resin and acrylic materials. Designed specifically for the reparation of crowns and bridges, CeraResin Bond overcomes the existing clinical difficulties associated with the chairside repair processes.

RELIABLE & EASY

HC PRIMER

SURFACE PRE-TREATMENT

HC Primer

HC Primer provides an ideal surface pre-treatment for a reliable adhesion of modern hybrid-ceramic materials to a tooth abutment using a self-adhesive resin cement. Thanks to its innovative chemical composition, HC Primer thoroughly penetrates the matrix of hybrid ceramics effectively preparing the surface of a restoration for the subsequent cementation.

AZ PRIMER

SIMPLIFIES ADHESION

AZ Primer

Inclusive of proprietary monomers adapted for high-performance bonding, AZ Primer simplifies adhesion to Zirconia, providing the surface of a restoration with a reliable chemical retention.

ML PRIMER

ENHANCES BONDING

ML Primer

A single-bottle metal primer, ML Primer enhances the bonding of resin materials to a variety of semi-precious, precious and non-precious alloys and metals, including gold, titanium, palladium, chromium, stainless steel, and nickel.

ORDER INFORMATION

BLOCK HC - CEREC

10mm x 12mm x 16mm

SHADE	PN
